

Jackalope Search Engine

A jackalope, a mythical creature with the body of a rabbit and the horns of a goat, is shown from the chest up. It has long, grey fur, a pink nose, and large, dark, velvet-covered antlers that curve upwards and outwards. The jackalope is looking towards the right. In the background, a vast, deep canyon with layered rock formations stretches into the distance under a clear blue sky. A thought bubble is positioned near the jackalope's head.

Let me go
Jackalope
that!

Project Motivation (Reasons to Jackalope)

Searches are done from the privacy of your own home

Unlike competitors who use your search results to show you ads, your data is just that. Yours.

Highly recommended for educational use as sources are continuously moderated at Wikipedia

Google's Revenue in 2018

See final slide for references

On Targeted Advertising

- Your searches are worth a lot of money
- That's because companies use those queries to target advertisements!

The Spread of Misinformation

Everyone is familiar with the term "fake news."

Sometimes it is impossible to tell what's factual

Wikipedia is a powerful encyclopedia of unbiased information

An Overview of Jackalope

1. The user enters search queries in the JSE GUI

2. The JSE Client Program sends queries to the JSE Server Program

3. The JSE Server Program processes the queries and searches Wikipedia

6. Web URLs are presented to the user in the JSE GUI

5. URLs are returned to the JSE Client Program

4. Wikipedia article sources are processed by the JSE Server Program

Jackalope Application Overview

Jackalope Graphical User Interface

- Clean search bar
- List of URLs based on search query
- Sorted by strength of relation

Jackalope Client Program

- Links JGUI and JSP
- Hosted on machine with
 - Standard OS
 - Hardware requirements
 - Libraries

Jackalope Server Program

- Performs all collations and URL evaluations
- Prevents hardware resources on user's machine

An Overview of Jackalope

Application

Non-web browser search tool
Private host on user's server

Sub Systems

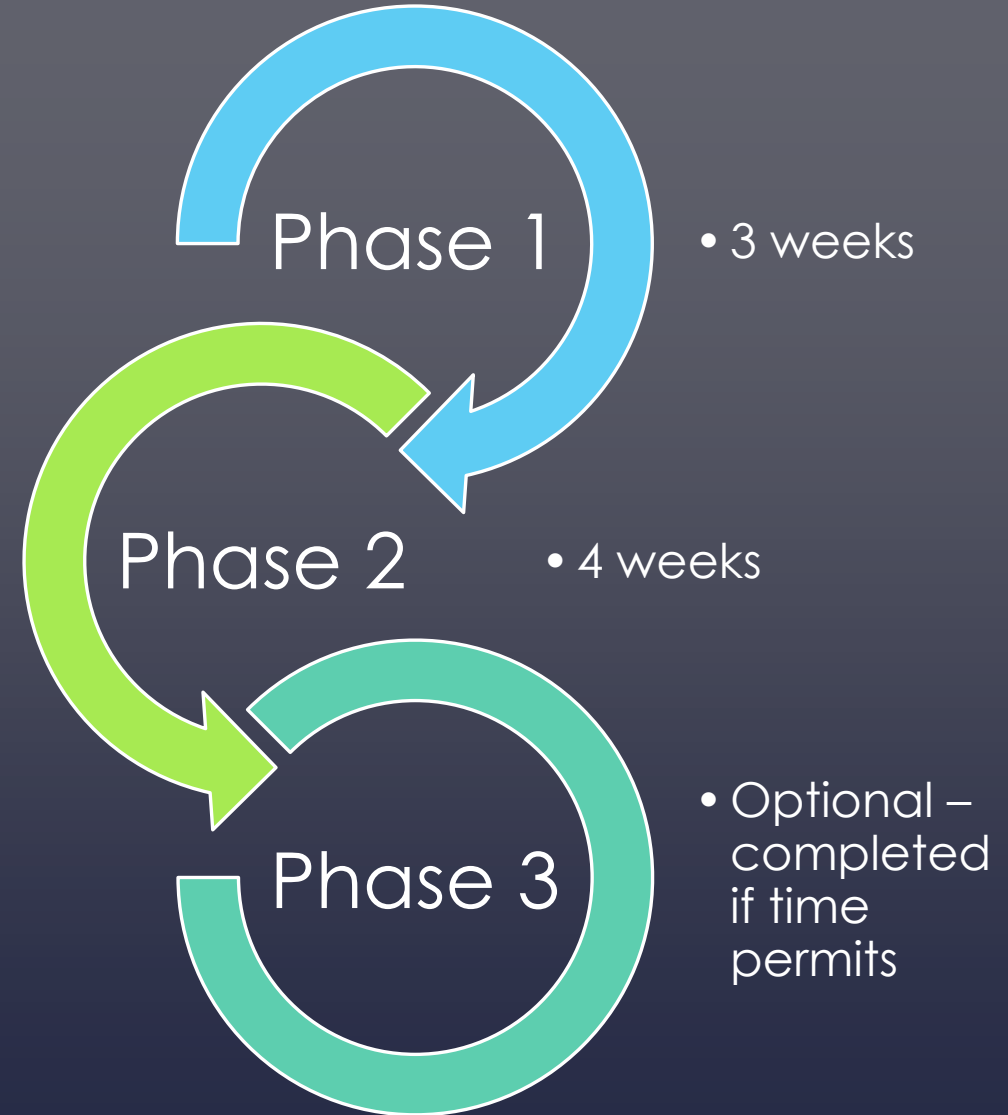

Jackalope Graphical User Interface
Jackalope Client Program
Jackalope Server Program

Returned Results

Only moderated and fact-checked information from trusted source(s).

Project Timeline

Phase 1 Development Focuses:

01

Creating a front-end that will take user input

02

Making sure the front-end can successfully send the user input to the server

Phase 2 Development Focuses:

Making sure the server finds URLs relevant to the keywords

Finding a way to neatly send the URLs back to the client machine

Format the URLs in a way that is readable and user-friendly

Phase 3 Development Focuses:

Refine the search
algorithm for accuracy

Adding an image
search

Including an automatic
installation feature

Expected Outcomes/Improvements

Outcomes:

Take user input
Find and format relevant URLs
Return it to the user

Future Improvements:

Wide variety of URLs
Image search engine

Questions /
Thank you!
