

HOW PRIVACY IS MEASURED

By limiting the level of direct exposure to third party network domains

Personal information or key words in HTTP GET request usage

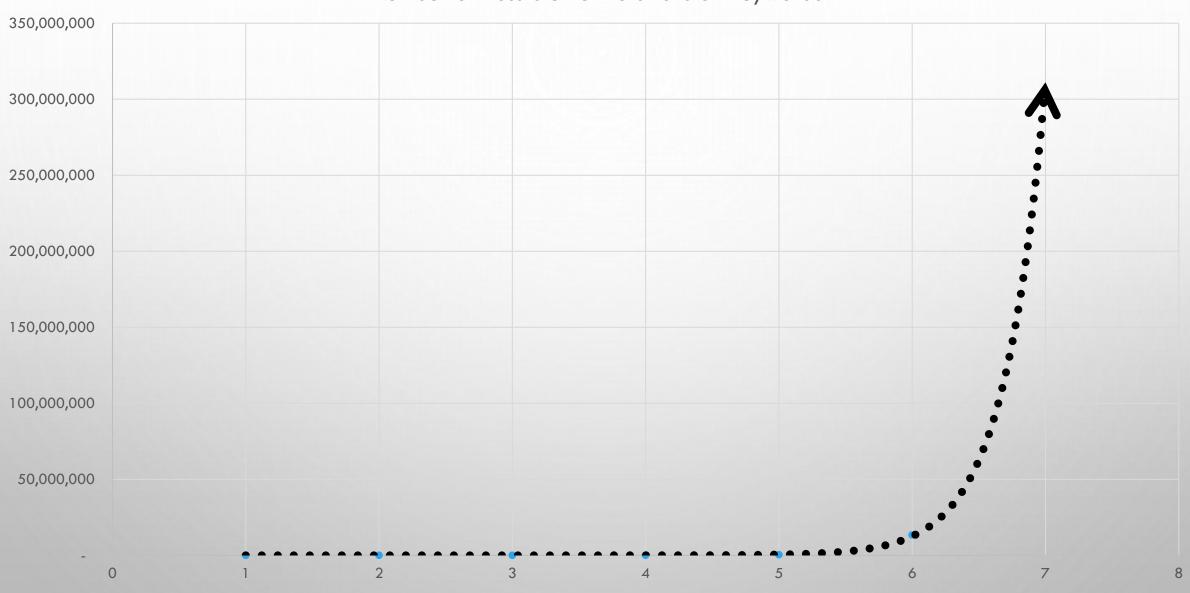

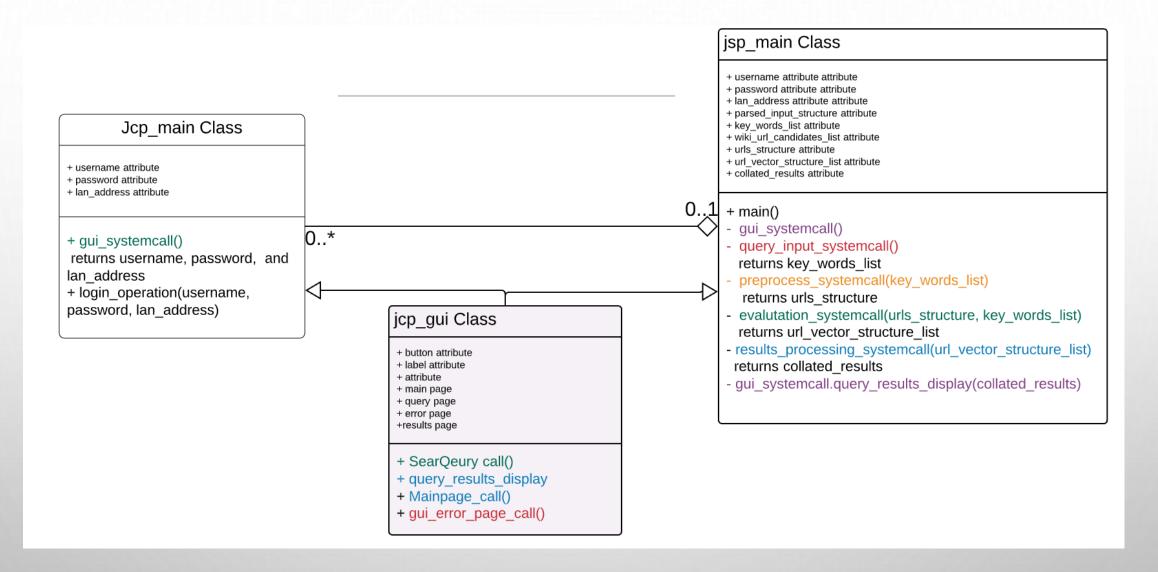

Making it impossible to collect user searches

HOW DO WE PROTECT PRIVACY?

- User Selectable Option: Dummy Searches
 - Every search also spawns two random searches
 - There is only a 1 in $\frac{(3n)!}{(2n)!}$ chance of guessing the correct permutation of keywords
 - In a query of n many keywords

Number of Possible Permutations of Keywords

INITIAL INTERFACE

SEARCH BAR

IMPLEMENTATION PLAN: CLIENT PROGRAM

Classes

- jcp_main
- jcp_gui

Windows
Subsystem for
Linux

Dependencies

- SSH communication protocol
- SSHPass utility
- X Window System

IMPLEMENTATION PLAN: SERVER PROGRAM

Classes

- jsp_main
- jsp_gui
- query_input
- preprocess
- multithread
- evaluation
- results_processing

CentOS 7.7 server

Dependencies

- Anaconda
- Clingo Potassco
 Answer Set
 Solving System
- SpaCy
- Scrapy
